

**CLIMATE
CHANGE**

Climate change is the greatest threat of our times and has severe consequences affecting all facets of life.

The impact of climate change is hitting Pakistan harder than is often realised; heat-waves and floods are occurring more frequently.

Islamic Relief ensures that climate is a major consideration in all of our work. For example, in Balochistan, which is an arid region, we provide farmers with seeds that require less water. Similarly, in Azad Jammu and Kashmir we have introduced kitchen gardening utilising waste water.

We have also installed solar plants and windmills in Khyber Pakhtunkhwa and Balochistan to provide alternative energy solutions.

We are building disaster-resilient shelters in Sindh that can stand extreme weather conditions.

We are also working with the national government to develop and implement policy to address climate change. Additionally, we are working with media and academia to raise awareness among people about the worsening effects of climate change on Pakistan.
